

19 HECTARES OF
RAINFOREST

ARE AT RISK OF
DISAPPEARING.

This is equivalent to about
730 tennis courts.

ADOPT
RAINFOREST

What's at stake

- 100–250 tree species per hectare, plus thousands of other plant and animal species.
- On a human timescale, mature lowland forest is irreversibly lost.
- $\pm$ 9,800 tonnes of stored CO₂, comparable to the annual emissions of roughly 800 households.

Join in and take action!

Only together can we secure 19 hectares of tropical rainforest, including long-term protection. We do this together with local residents, wildlife cameras, and professional rangers.

If we don't act now, the forest will be cut down for economic gain.
